PROFILE

I am an MEng Mechanical Engineering student at Lancaster University. I've got a passion for control engineering, embedded systems, and simulating problems. I've got experience in using tools such as MATLAB, Python, SolidWorks, and ANSYS. I'm seeking a graduate engineering role to develop my skills and to progress my career.

EDUCATION

Lancaster University Sep 2023 – Jun 2027 (expected)

MEng Mechanical Engineering (integrated master's)

- First Class result to date (Years 1–3); final classification awarded on completion of Year 4

Other Qualifications Sep 2021 – Jun 2023

- A-Levels in Maths, Physics, and History. Extended Project Qualification completed at Sixth Form.

PROJECTS

I have worked on a range of engineering projects including group projects set as coursework during my studies at Lancaster University. I've identified some key projects below, but the full list can be viewed on my portfolio page:

- Autonomous line-following robot with projectile system - a group project from my second year where I developed skills in embedded electronics, programming, and time management + leadership.
- Automatic warfarin dosage control using model based control systems - my third year individual project focused on developing a control system to regulate anticoagulant medication based on the results of blood tests. I developed skills in MATLAB, data visualisation/analysis, and project management on a significant piece of work (meetings with my supervisor, organisation, data security).

WORK EXPERIENCE

Development Assistant, Poole Alcock Solicitors, Nantwich (Full Time) Jul 2026 – Sep 2026

- Developed tools on the Proclaim case management system to help case handlers work faster and manage risk more consistently
- Designed and implemented automated risk assessment calculations and escalation rules so high-risk cases were flagged and routed without manual checking
- Replicated and improved existing workflows to cut repetitive work; met stakeholders to shape them around how case handlers actually work
- Tested and iterated changes in a live environment, balancing new functionality against the stability of a system the firm relies on daily
- Trained in Access Group Proclaim and certified in the Technical modules

Digital Marketing Assistant, Poole Alcock Solicitors, Nantwich (Full Time) Jun 2023 – Sep 2023, Jun 2024 – Sep 2024

- Supported the firm's digital marketing strategy through SEO changes to the website and keyword research
- Wrote copy for new web pages and published content online
- I completed this role over two summers - working to improve the SEO performance of the site and updating outdated content.

Shop Floor Assistant, Cheerbrook Farm Shop (Part Time) Aug 2022 – Aug 2023

- During my A-Levels I worked on the shop floor at my local farm shop. I was responsible for operating the till, putting out and checking stock, cleaning the store, and supporting elderly customers with their shopping.

TECHNICAL SKILLS

Engineering/Technical Software: SOLIDWORKS, MATLAB (including Simulink and control system toolbox), ANSYS (Mechanical and Fluent), BambuLab, Office365.

Programming: Python (including data analysis and machine learning), C++ (for embedded electronics), Git.

CORE SKILLS

- Effective in teams, with strong organisation and time management skills. My degree and work experience have given me a good foundation to develop these key skills throughout my engineering career
- Hardworking, with a real passion for research and problem solving
- Communicate technical work clearly and listen to the people using it, from shaping workflows around case handlers' needs to writing up and evaluating project findings
- Self-directed: managed a year-long individual research project from literature review to conclusions
